## Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 21 blocking script resources and 11 blocking CSS resources. This causes a delay in rendering your page.

Approximately 16% of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

## Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

132.5KiB of the HTML response was required to render the above-the-fold content. This requires 4 network round-trips. However, if the HTML response were compressed, then the HTML required to render the above-the-fold content could be delivered in just 2 network round-trips. [Enable compression](#) for the HTML response in order to prioritize the visible content for this page.

- Only about 16% of the final above-the-fold content could be rendered with the HTML delivered within 2 round-trips.

## Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

132.5KiB of the HTML response was required to render the above-the-fold content. This requires 4

network round-trips. However, if the HTML response were compressed, then the HTML required to render the above-the-fold content could be delivered in just 2 network round-trips. [Enable compression](#) for the HTML response in order to prioritize the visible content for this page.

- Only about 24% of the final above-the-fold content could be rendered with the HTML delivered within 2 round-trips.
