compression.

- Minifying <https://www.energis.de/media/js/frontend/component/tariff/finder.js> could save 231B (27% reduction) after compression.
- Minifying <https://www.energis.de/media/js/frontend/general/validation.js> could save 154B (26% reduction) after compression.
- Minifying <https://www.energis.de/media/js/frontend/general/district.select.js> could save 121B (18% reduction) after compression.

## Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 4% of the final above-the-fold content could be rendered with the full HTML response.

## 99 / 100 User Experience

### Consider Fixing:

#### Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target `<form id="finder" class="">Personen im Ha...Sie Ihren Ort</form>` is close to 3 other tap targets.
- The tap target `<span class="slider-handle">` is close to 1 other tap targets.
- The tap target `<a href="/footernavigation/impressum">Impressum</a>` and 3 others are close to other tap targets.

## Consider Fixing:

### Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

[Enable compression](#) for the following resources to reduce their transfer size by 4.3KiB (70% reduction).

- Compressing <https://www.energis.de/media/img/icon.combigas.svg> could save 4.3KiB (70% reduction).

### Minify HTML

Compacting HTML code, including any inline JavaScript and CSS contained in it, can save many bytes of data and speed up download and parse times.

[Minify HTML](#) for the following resources to reduce their size by 2.5KiB (20% reduction).

- Minifying <https://www.energis.de/> could save 2.5KiB (20% reduction) after compression.

### Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

[Minify JavaScript](#) for the following resources to reduce their size by 4KiB (36% reduction).

- Minifying <https://wm2.wiredminds.de/track/count.js> could save 3.5KiB (38% reduction) after compression.
- Minifying <https://www.energis.de/media/js/frontend/component/tariff/finder.js> could save 231B (27% reduction) after compression.

## Desktop

- Minifying <https://www.energis.de/media/js/frontend/general/validation.js> could save 154B (26% reduction) after compression.
- Minifying <https://www.energis.de/media/js/frontend/general/district.select.js> could save 121B (18% reduction) after compression.

### Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 5% of the final above-the-fold content could be rendered with the full HTML response.
