Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 6 blocking script resources and 16 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

71.3KiB of the HTML response was required to render the above-the-fold content. This requires 3 network round-trips. However, if the HTML response were compressed, then the HTML required to render the above-the-fold content could be delivered in just 2 network round-trips. [Enable compression](#) for the HTML response in order to prioritize the visible content for this page.

- Only about 3% of the final above-the-fold content could be rendered with the HTML delivered within 2 round-trips snapshot:22.

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 19 blocking script resources and 16 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Consider Fixing:

Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

[Minify CSS](#) for the following resources to reduce their size by 8.8KiB (19% reduction).

- Minifying <https://www.travel-blog.ca/assets/plugins/revslider/public/assets/css/settings5223.css?ver=5.2.6> could save 6.4KiB (19% reduction).
- Minifying <https://www.travel-blog.ca/assets/themes/firefly/stylefe9d.css?ver=4.7.3> could save 2.4KiB (19% reduction).

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

[Minify JavaScript](#) for the following resources to reduce their size by 5.4KiB (17% reduction).

- Minifying <https://www.travel-blog.ca/assets/themes/firefly/assets/js/cstheme-scriptfe9d.js?ver=4.7.3> could save 3.3KiB (17% reduction).
- Minifying <https://www.travel-blog.ca/assets/plugins/contact-form-7/includes/js/scripts1c9b.js?ver=4.6.1> could save 2KiB (18% reduction).

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

Desktop

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 2% of the final above-the-fold content could be rendered with the full HTML response snapshot:22.
